

CLAIMS

1. A liposomal composition comprising a glycoside exhibiting antitumor activity, a phospholipid, and a positive-charge-providing substance; the glycoside being composed of GlcNAc-Gal-, GlcNAc-Gal-Glc-, Fuc-Gal-, Gal-Glc-, or Gal- as a sugar moiety, and a hydrophobic compound capable of forming a liposome.

2. A liposomal composition comprising a glycoside selected from among glycosides represented by the following formulas

(1) through (3):

[F1]

[wherein G represents GlcNAc-Gal-, GlcNAc-Gal-Glc-, Fuc-Gal-, Gal-Glc-, or Gal-, and n represents an integer of 12 to 26];

a phospholipid; and a positive-charge-providing substance.

3. The liposomal composition as recited in claim 1 or 2, wherein the positive-charge-providing substance is an aliphatic amine.

5 4. An anticancer agent comprising the liposomal composition as recited in any one of claims 1 to 3.
